

SR2 Premium Series

If you're looking for incredible ride quality the Super Shox SR2 series delivers. Offered in 3 lengths. The 13" for a lower ride height, 13.5", and 14" with additional shock travel that sits at a 12" OEM shock height. Suspension travel is maximized and gives the bike a plush feel with incredible stability and control. It is clear that Super Shox has a long history in racing when you look at the quality of the components. There are no weak links here. The SR2 Series comes with a robust relocation mount that attaches to the swing arm and moves the shock mount to a steel stud for a strong mounting point and a location that keeps the ride height where you want it.

Transform your stock suspension with a set of SR2 Premium Series 14" Super Shox and you will wonder why your bike didn't come with a set of these straight from the factory. With 3-1/2" of travel the road never felt so smooth. With the extra travel to soak up the big hits the days of being jolted off the seat are over. Then to have it sit at the height of a stock 12" shock is even more amazing. This is a great shock for all touring bikes with OEM 13" or 12" shocks.

For riders looking for a lower ride height but not the beating that comes with a low shock look no further than the SR2 Premium Series 13" Super Shox. With 3" of travel that sits 1" lower than a stock 12" shock. The stock 12" shock has a meager 2" of travel but with Super Shox there is a full 3" of travel adding 30% more insulation from those bone jarring hits. The days of being beat up by a bike with low shocks is over when you have a set of the SR2 Premium 13" Super Shox.

Pictures show the distance from the stock shock mounting location on the swing arm to the top shock mounting point without a rider on the seat. With a rider, the lengths are roughly 9/16" lower depending on the pre-load setting and rider weight.
